Welcome to the Advanced Design System 2009 Documentation

Advanced Design System (ADS) provides a complete set of simulation technologies ranging from frequency and time-domain circuit simulation to electromagnetic field simulation. ADS lets you fully characterize and optimize designs. The single, integrated design environment provides system and circuit simulators, along with schematic capture, layout, and verification capability. ADS simplifies your design flow by eliminating the stops and starts associated with changing design tools in mid-cycle.

Please use the drop-down menus above to view the information you need.
